SUMMARY

Full-Stack Engineer proficient in **Java-based DSA** and the **MERN stack**, with a focus on architecting automated, **SLA-driven solutions** for administrative workflows. Expert in bridging the gap between manual processes and scalable technology through robust state management and secure cloud deployments on **AWS/Render**. Adept at optimizing backend performance and designing high-availability user experiences with an engineering-first mindset.

EXPERIENCE

Full Stack Developer (Lead) | Group Project | Jan 2026 – Present

Developed a full-stack centralized grievance management platform to address administrative delays by implementing an Automated Escalation Logic using Node.js. Designed a system where unresolved complaints are automatically escalated to higher authorities after a set deadline, ensuring 100% accountability and timely resolution of student issues. Managed the complete Full-Stack Development lifecycle, including designing JWT-protected role-based dashboards, secure RESTful APIs, and real-time email notifications via SMTP. Focused on end-to-end user workflows and rigorous testing to improve transparency and streamline the resolution process for hostel administration.

PROJECTS

HostelResolve - Hostel Complaints Management System | [GitHub](#) Feb 2026 *React.js, Node.js, Express.js, MongoDB, Redux Toolkit, JWT, Nodemailer, CSS*

Built a centralized platform using the MERN stack to streamline communication between 500+ students and administration. Implemented Role-Based Access Control (RBAC) with secure JWT dashboards and a robust state management system using Redux Toolkit. Integrated Nodemailer for real-time notifications and secure token-based password recovery. Developed a responsive, mobile-first UI and optimized RESTful APIs to manage the complete complaint lifecycle, reducing manual follow-up efforts significantly.

Hostmate - Room & Home Rental Platform | [GitHub](#) Jun 2025 – Present *Node.js, Express.js, MongoDB, EJS, Bootstrap, Stripe, MapLibre, Cloudinary, Render (deployed on AWS)*

Hostmate is a full-stack room rental platform that enables users to list, explore, and book rental rooms through a secure and structured system. The application is built using an MVC architecture and exposes RESTful APIs for core functionalities such as listings, bookings, reviews, and payments. Secure authentication and authorization mechanisms are implemented to ensure protected access and user data integrity. Stripe is integrated to handle online payments securely, while Cloudinary is used for efficient image storage and management. The platform also incorporates interactive geolocation-based search using OpenStreetMap with MapLibre and MapTiler, allowing users to explore properties directly on a dynamic map interface. Backend query optimization and server-side enhancements improve overall API performance and data handling efficiency. The application is deployed on Render using AWS infrastructure, ensuring scalable and reliable cloud-based performance.

CERTIFICATIONS & ACHIEVEMENTS

- **Java Certified** - Data Structure & Algorithm (June 2024) | Credential ID: 662fa0f98bc9344703016d06
- **Full Stack Developer** - MERN Stack (Jan 2026) | Credential ID: 66b4d31180c9fe2a87035972

SKILLS

Languages: Java, JavaScript, Python

Frontend: React, HTML, CSS, Bootstrap, Tailwind CSS

Backend: Node.js, Express.js

Database: MySQL, MongoDB

Developer Tools: Visual Studio Code, Git/GitHub, Postman, Hoppscotch, IntelliJ

EDUCATION

B.Tech in Computer Science

Medicaps University, Indore (2023 - 2027) | CGPA: 7.51/10.0
